

## THE SEACYCLE, SO COMFORTABLE AND EASY TO PEDAL

Publication Seacycle Canada

April 30th, 2016

As easy as walking... but 3 times faster (7 to 8 km/h) !

**With the Seacycle, you'll be motivated, guaranteed, to go for a ride and discover your lake. It won't spend its time moored to the dock or on the shore...**

The pedal catamaran Seacycle is powered by highly efficient propellers compared to the paddle wheel of a paddleboat. This allows you to sail several kilometers with minimal effort.

High winds or 3 feet waves do not stop you. Retired customers sail 450 km on rivers, some 1000 km in 17 days on the Adriatic Sea in Italy ... others ride on their lake, others do trainings for their health ...

With its 6 feet wide and 15 feet long, the Seacycle is virtually impossible to capsize and is unsinkable due to its construction in low-density polyethylene of high robustness.

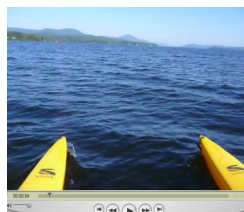

Here are the Seacycle LIMO components (assembly in less than 10 minutes without tools):

- 4 comfortable adult seats positioned high enough above the water, allowing not get wet by the waves (the Seacycle can be used throughout the year as long as there is no ice on the water);
- 2 pivoting propeller drive units that rotate automatically in contact with a rock or the beach;
- 2 polyurethane profiled hulls, unsinkable;
- 2 polyurethane hull supports;
- 2 elongated anodized aluminum rails adjustable for leg lengths;
- 1 transverse anodized aluminum support;
- 2 foldable plastic baskets;
- 1 pivoting rudder system;

Considering a lifetime of more than 20 years, the Seacycle is like a long-term investment in your pleasure... and health !

See the Seacycle on these 2 videos:

### Main advantages:

Easier to pedal than a paddleboat and 5 times faster ... Cruise 8 km / h, sprint 12 Km / h !!!

Possible to train for weight loss ... Burn close to 700 calories in one hour at 65% of heart rate (fat burning zone)

Each person pedal at their own pace ... it can easily be lead solo since there is a rudder system

The Seacycle is high above the water so no watering as on a paddleboat... no water entry ...

Use from the moment the ice is melted on the lake, until winter

Exploration, picnic, swimming, apero, fishing...

Zéro noise, zero pollution...

Possibility of electric motor option for use as electric boat ...
